

Pour Across America mobile application Adjustment April 21st

My modo: "From tasting notes to wine intelligence."

In this document we will discuss improvements and adjustments that need to be made to improve the functionality and the usability of the application

App Description (repeated from previous document)

I am building a mobile app focused on **wine evaluation, note-taking, and data visualization**. The goal is to create a structured and intelligent alternative to existing wine apps, which are mostly focused on ratings and purchasing rather than personal analysis and learning.

This app will function as a **personal wine journal + scoring system + analytics tool**, designed for serious wine enthusiasts, educators, and professionals.

Core Purpose

The app should allow users to:

- Record structured wine tasting notes
- Apply a consistent scoring system
- Store and organize wine data
- Search and filter past wines efficiently ("Show me volcanic wines I rated above 42")
- Generate simple visual summaries and shareable content

Core Requirement

The user should never need to scroll horizontally to read or interact with content.

Ensure the app layout fits **perfectly within any mobile screen**, eliminating the need for horizontal (left-right) scrolling.

All content must:

Fit within screen width

Adjust dynamically to different screen sizes (iPhone, Android, etc.)

Only **vertical scrolling** should be allowed

Adjustment #1: Dual Profile System (User vs Sommelier)

 **Objective**

Introduce two distinct user profiles to simplify the experience for casual users while preserving depth for advanced users (sommeliers).

Profiles to Implement

1. User Profile - **Wine Explorer** (Standard)

- Designed for casual / everyday users
- Focus on **speed and simplicity**
- Reduced number of required inputs
- More guided, intuitive experience (shortcuts, fewer fields)

2. **Sommelier Profile** (Advanced)

- Designed for professionals / advanced users
- Sommelier will submit their sommelier certificates (PDF document or JPG) to be approved for this level
- Includes **full tasting structure and detailed inputs**
- Requires more fields (technical scoring, detailed aroma, structure, etc.)
- No simplification of the methodology

Future Consideration

- Allow users to **switch profiles later** in settings
- Or introduce: "Upgrade to Sommelier Mode" (people may obtain the certification, they will need to upload the document and be "approved" for Sommelier level)

User Flow

1. During **registration**, user selects:
 - "Wine Explorer" (Standard)
 - "Sommelier" (Advanced)
2. Based on selection:
 - The app loads a **different input interface and flow**
 - The experience is tailored to that profile

Key Features: Good for Wine Enthusiast & Sommelier Profile

1. Wine Entry

Users can create a wine record with:

- Photo label recognition (OCR + option to adjust/correct)
- Manually in case Label is not recognized or unavailable

We will maintain all the fields as they are appearing now:

Wine Name

Producer/Winery

Vintage

Country

Grape Variety

Price (this bucket needs adjustment): Price by Bottle/Price by Glass

Tasting Date (by default current date)

Location – Geo Referenced (right now it is not)

Continue

All the data that we read and/or manually entered in the previous section must be visible here.

Wine Name will be carried from previous section (label scan)

Producer/Winery will be carried from previous section (label scan)

Vintage will be carried from previous section (label scan)

Country will be carried from previous section (label scan)

Additionally, Users (both Wine Enthusiast and Sommelier) can **select Region and Subregions**

Grape Variety will be carried from previous section (label scan)

By default the grape variety that is identified by scanning the label will appear as **100%**. Users may change the % and add additional grape if necessary but by default it is set to 100%

Price will be carried from previous section

Location will be carried out from previous section

Continue

Adjustment #2: Aroma / Flavor Wheel

Create a flexible aroma/flavor input system that adapts to user expertise while allowing full customization.

Profile-Based Experience

1. Wine Enthusiast (Standard) See Appendix I

- Limited, simplified set of aroma/flavor categories
- Focus on **speed and ease of use**
- Predefined options only (curated list, 14 categories)

- Optional drill-down (4-6 items per category max)
- Users can manually add additional flavor by free text input. Custom entries should: Be stored alongside predefined tags; Be searchable later; Appear in the wine's flavor profile
- Frequently used custom notes can be:
 - Suggested automatically
 - Added to user's personal "quick list"

2. Sommelier (Advanced) See Appendix I marked with "S"

- Expanded aroma/flavor library
- More categories and deeper subcategories
- Full structure aligned with professional tasting methodology
- Greater precision and flexibility

Adjustment #2.1 Smart Shortcuts Placement & Behavior (Visible for both profiles)

 Objective: Provide a fast entry path (Smart Shortcuts) and a full manual path (Aroma Wheel), with easy switching between the two.

The predefined "smart shortcut" auto-populates aroma and structure inputs, while still allowing full manual customization.

Screen Structure: Two Tabs

At the top of the wine entry screen:

"Smart Shortcuts"

"Aroma Wheel"

Users can tab on **"Smart Shortcuts"** and select from 6 predefined shortcuts or select **"Aroma Wheel"** and go through all the process of selected aromas.

Behavior

1. Shortcut Selection

- When a user selects a shortcut:
 - The app auto-populates:
 - Aroma/flavor categories (preselected tags)
 - Structure values (e.g., acidity, body, tannin, etc.)
- Preselected items should be visibly highlighted

2. Manual Adjustment (Required)

- After selecting a shortcut, users must be able to:
 - Open the aroma/flavor wheel
 - Add additional notes

- Remove preselected notes
- Adjust structure sliders

👉 Shortcuts should never lock the user into a fixed profile

🍷 SMART SHORTCUTS (CORE SET – 6) To be added

1. 🍋 Fresh & Crisp White

Note for users: “Use for: Sauvignon Blanc, Albariño, Pinot Grigio, Txakoli”

Auto-select:

Aroma Profile:

- Citrus (3) → lemon, lime
- Herbal (2) → grass
- Mineral (2) → saline

Structure:

- Acidity: 8–9
- Body: 3–4
- Intensity: 6–7

👉 Style: light, refreshing, zesty

2. 🍑 Ripe & Round White

Note for users: “Use for: Chardonnay (unoaked), Viognier, Chenin Blanc”

Auto-select:

Aroma Profile:

- Stone Fruit (3) → peach, apricot
- Tropical (2) → mango
- Sweet/Ripe (1–2) → ripe fruit

Structure:

- Acidity: 5–6
- Body: 6–7
- Intensity: 6–7

👉 Style: smooth, fruity, round

3. 🍷 Oaky Chardonnay

Note for users: “Use for: Oaked Chardonnay, Napa Chardonnay, White Burgundy”

Auto-select:

Aroma Profile:

- Oak/Toast (3) → vanilla, toast
- Stone Fruit (2) → peach
- Other (2) → butter, cream

Structure:

- Acidity: 5–6
- Body: 7–8
- Intensity: 7–8

👉 Style: rich, creamy, oak-driven

4. 🍷 Light & Juicy Red

Note for users: “Use for: Pinot Noir, Gamay, light reds”

Auto-select:

Aroma Profile:

- Red Fruit (3) → strawberry, raspberry
- Floral (2) → violet
- Herbal (1) → fresh herbs

Structure:

- Acidity: 7–8
 - Tannin: 3–4
 - Body: 4–5
 - Intensity: 5–6
- 👉 Style: fresh, vibrant, easy drinking

5. 🍒 Ripe & Smooth Red

Note for users: “Use for: Merlot, Zinfandel, Grenache”

Auto-select:

Aroma Profile:

- Black Fruit (3) → blackberry, plum
- Spice (2) → clove
- Sweet/Ripe (2) → jam

Structure:

- Acidity: 5–6
 - Tannin: 5–6
 - Body: 6–7
 - Intensity: 6–7
- 👉 Style: soft, fruit-forward, smooth

6. ❤️ Bold & Structured Red

Note for users: “Use for: Cabernet Sauvignon, Syrah, Malbec”

Auto-select:

Aroma Profile:

- Black Fruit (3) → blackcurrant
- Spice (2) → black pepper
- Oak/Toast (2) → cedar, smoke

- Tannin: 7–9
- Body: 8–9
- Intensity: 8–9

👉 Style: powerful, structured, intense

Structure:

- Acidity: 5–6
-

Adjustment #3: Structure System (Radial Diagram + Profile Logic)

- Objective: Create a single radial (spider) diagram that:
Works for both Explorer and Sommelier
Uses mixed scales (numeric + categorical)
Stay clean on mobile

Users can evaluate wines using predefined fields such as (with 0-10 scale, or graphically):

FINAL PARAMETERS (6 AXES)

- Sweetness Scale: 1-10** keep numeric with sliding bar. Identical for both profiles

- Acidity Scale: 1-10** keep numeric with sliding bar. Identical for both profiles

- **Tannin Scale: 1–10** 📌 numeric with sliding bar. Identical for both profiles

- **Body**

Wine Enthusiast

Light (internal mapping 3)

Medium (internal mapping 6)

Full (internal mapping 9)

- **Sommelier (marked on image with “S” only visible for Sommelier profile)**

Light (internal mapping 2)

Medium – (Medium Minus) (internal mapping 4)

Medium (internal mapping 6)

Medium + (Medium Plus) (internal mapping 8)

Full (internal mapping 10)

Show hint under selection (use wording as on image):

Light → “like water / skim milk”

Medium → “like whole milk”

Full → “like cream”

- Alcohol

Wine Enthusiast

Low (internal mapping 3)
 Medium (internal mapping 6)
 High (internal mapping 9)

Sommelier

Low (internal mapping 2)
 Medium – (Medium Minus) (internal mapping 4)
 Medium (internal mapping 6)
 Medium + (Medium Plus) (internal mapping 8)
 High (internal mapping 10)

Show hint under selection:

Low → “light, no warmth in the back of your throat, few/no legs”

Medium → “gentle warmth, legs move at a moderate speed”

High → “noticeable heat, many legs, that move slowly”

- Intensity (keep numeric, but in blocks 1-3, 4-6, 7-8, 9-10) and on the image

Wine Enthusiast

Low (internal mapping 3)
 Medium (internal mapping 6)
 High (internal mapping 9)

Sommelier

Low (internal mapping 2)
 Medium – (Medium Minus) (internal mapping 4)
 Medium (internal mapping 6)
 Medium + (Medium Plus) (internal mapping 8)
 High (internal mapping 10)

Show hint under selection:

Low → “Subtle, you need to bring your nose **into the glass**”

Medium → “Noticeable, you smell it at nose or chin level”

High → “Expressive, you can smell it at chin level or even lower”

- Finish

Adjustment #4: 5 technical categories (20 points each):

1. 🏆 Balance → Do all elements feel in harmony?

What it is: Balance is how well all parts of the wine work together: acidity, tannin, alcohol, body, fruit, and oak.

(NOTE: the image just shows 1-10, but we need 1-20 scale)

BALANCE

Do all elements feel in harmony?

Balance is how well all parts of the wine work together.
Acidity, tannin, alcohol, body, fruit, and oak.

WHAT IT IS

Balance is how well all elements of the wine work together: acidity, tannin, alcohol, body, fruit, and oak.

HOW TO IDENTIFY IT

-  **Nothing sticks out too much**
No single element grabs all the attention.
-  **No element feels overpowering**
Acidity, tannin, alcohol, body, fruit and oak are in check.
-  **The wine feels harmonious and integrated**
All parts work together as one.

WHAT TO LOOK FOR

HIGH BALANCE
Everything is in harmony.

- ✓ Smooth, seamless
- ✓ Everything fits
- ✓ You don't notice individual components, just the whole
- ✓ Pleasant and easy to enjoy

LOW BALANCE
Something is out of balance.

- ✗ One element stands out
- ✗ Too sharp (acid), too hot (alcohol), or too drying (tannin)
- ✗ Feels disjointed or uncomfortable

 **TIP** If you notice something, it's probably not balanced.

HOW TO SCORE
Use a 1–10 scale

1 2 3 4 5 6 7 8 9 10

Very Unbalanced Neutral Perfectly Balanced

★ Balance is one of the most important qualities of a great wine.

2. Intensity (autofill from Previous selection)

Previous selection is 1-10 here we want to convert to 1-20 scale.

Wine Enthusiast: Autofill the numbers from previous selection multiplying by 2

Sommelier: Auto-filled BUT editable in Sommelier mode allow users to adjust the number on the bar scale.

How expressive the wine is on the nose and palate.

3. Complexity

How many layers and dimensions the wine has. Does it evolve, open up, and stay interesting?

COMPLEXITY

How many layers do you find?

WHAT ARE "LAYERS"?
Think of layers as different dimensions of the wine that appear one after another or together.

1	2	3	4
FRUIT LAYER This is what you notice first The core of the wine - citrus - apple - cherry - blackberry	SECONDARY (WINEMAKING) LAYER Adds depth and texture From fermentation or aging - oak (vanilla, toast) - spice - creaminess	TERTIARY (DEVELOPMENT) LAYER More complex, often subtle From age or evolution - mushroom - leather - dried fruit - honey	TERROIR LAYER Imprint of the soil and the climate – connects wine to origin From place and soil - mineral - saline - earthy tones

HOW TO IDENTIFY IT

Do aromas and flavors change over time?
Changes may happen inside your glass – the first sip may be very different from the last.

Do you notice multiple notes (fruit, spice, earth, etc.)?

Does the wine keep your attention?

WHAT TO LOOK FOR

HIGH COMPLEXITY
Layered, evolving, interesting.

LOW COMPLEXITY
Simple, one-dimensional.

HOW TO SCORE
Use a 1–20 scale

1 2 3 4 5 6 7 8 9 10 11 12 13 14 15 16 17 18 19 20

Very Simple Moderate Highly Complex

TIP: Complexity is not about how strong the wine is, but how many different things you can discover and how they come together.

4. Finish Scale: 1–6, 7–13, 14–20 🖱️ **numeric with sliding bar. Identical for both profiles.** (NOTE: the image just shows 1–10, but we need 1–20 scale)

FINISH

How long the flavors and sensations linger after you swallow.

1 – 3 **4 – 7** **8 – 10**

SHORT **MEDIUM** **LONG**

SHORT
Flavors fade quickly.
Sensation disappears soon after swallowing.

EXAMPLE SENSATION:
Like a quick echo.

MEDIUM
Flavors linger for a few seconds.
You can still feel them, but they start to fade.

EXAMPLE SENSATION:
Like a conversation that lasts a little while.

LONG
Flavors stay with you for many seconds.
The finish is persistent and noticeable.

EXAMPLE SENSATION:
Like the music that remains after the song ends.

How to evaluate: Swallow the wine, then count in your head how long the flavors and sensations last. (Focus on the aftertaste, not the initial taste.)

S = Sommelier scale • Visible only for Sommelier profile

5. Typicity / Precision

How well the wine represents its grape, style, region, or intended expression.

Pour Across America mobile app prompt

TYPICITY / PRECISION

Does the wine express what it should?

Typicity (or precision) is how well the wine reflects its grape variety, region / terroir, and intended style.

WHAT IT IS

How well the wine represents:

-  Its **grape** variety
-  Its **region** / terroir
-  Its intended **style**

In simple terms:

“ Does this taste like it should? ”

HOW TO IDENTIFY IT

- 

Do the aromas match what you expect from this grape?
Does it show the typical character of the variety?
- 

Does it feel true to its origin or style?
Does it reflect the region, climate, or style it comes from?
- 

Is the expression clear and focused, or vague and confusing?
Can you clearly understand what this wine wants to be?

WHAT TO LOOK FOR

HIGH TYPICITY / PRECISION

- ✓ Clear identity
- ✓ Recognizable style
- ✓ Focused, well-defined flavors
- ✓ Feels authentic and true to its origin

EXAMPLE
Sauvignon Blanc that clearly shows citrus, green, and freshness.

LOW TYPICITY / PRECISION

- ✗ Unclear identity
- ✗ Confusing or muted expression
- ✗ Doesn't match expectations
- ✗ Feels generic or "lost"

EXAMPLE
A wine where you can't tell the grape or style.

KEY DISTINCTION

Balance = how well things fit together | **Typicity** = how true it is to its identity

QUICK TIP

Can you recognize what this wine is trying to be?

HOW TO SCORE

Use a 1–20 scale

123456781011121314151617181920

Unclear, GenericSomewhat RecognizableClear ExpressionPrecise, Textbook, Outstanding

TIP: Great wines don't just taste good. They make sense.

The system will automatically calculate the score and display 1-100

Appendix I

If a subcategory is not marked, it is visible in both profiles: Wine Enthusiast & Sommelier.

Any category or subcategory marked with “S” is:

- **Visible ONLY in Sommelier profile**
- **Hidden from Explorer profile**

Citrus:

Lemon
Lime
Grapefruit
Orange
Mandarin “S”
Lemon zest “S”
Orange peel “S”

Orchard Fruit:

Green apple
