

Adjustment #4: 5 technical categories (20 points each):

1. ⚖️ Balance → Do all elements feel in harmony?

What it is: Balance is how well all parts of the wine work together: acidity, tannin, alcohol, body, fruit, and oak.

(NOTE: the image just shows 1-10, but we need 1-20 scale)

BALANCE

Do all elements feel in harmony?

©

Balance is how well all parts of the wine work together.
Acidity, tannin, alcohol, body, fruit, and oak.

WHAT IT IS

Balance is how well all elements of the wine work together: acidity, tannin, alcohol, body, fruit, and oak.

HOW TO IDENTIFY IT

Nothing sticks out too much

No single element grabs all the attention.

No element feels overpowering

Acidity, tannin, alcohol, body, fruit and oak are in check.

The wine feels harmonious
and integrated

All parts work together
as one.

WHAT TO LOOK FOR

HIGH BALANCE

Everything is in harmony.

- ✓ Smooth, seamless
- ✓ Everything fits
- ✓ You don't notice individual components, just the whole
- ✓ Pleasant and easy to enjoy

LOW BALANCE

Something is out of balance.

- ❌ One element stands out
- ❌ Too sharp (acid), too hot (alcohol), or too drying (tannin)
- ❌ Feels disjointed or uncomfortable

TIP If you notice something, it's probably not balanced.

HOW TO SCORE

Use a 1–10 scale

Balance is one of the most important qualities of a great wine.

2. Intensity (autofill from Previous selection)

Previous selection is 1-10 here we want to convert to 1-20 scale.

Wine Enthusiast: Autofill the numbers from previous selection multiplying by 2

 Sommelier: Auto-filled BUT editable in Sommelier mode allow users to adjust the number on the bar scale.

How expressive the wine is on the nose and palate.

3. Complexity

How many layers and dimensions the wine has. Does it evolve, open up, and stay interesting?
